Express.js RabbitMQ Socket.io REST API TypeScript Backend NestJS Redis Linux ORM

About me

My main stack is Node.js, AWS, NestJS, MongoDB/PostgreSQL, React with TypeScript. At work, I actively use Docker, RabbitMQ, Redis, and WebSockets. I have experience integrating with payment systems (Stripe), writing automated scripts (Jira Automations, Puppeteer), and optimizing backends for high-load services.

For three years, I worked in an IT team as a developer, and for the last year, I've been managing a production process to gain management experience. In parallel, I continue to fulfill private development orders.

I always strive for results and take responsibility for the processes in which I participate. It is important that everyone on the team is involved and works toward common success. I am confident that any task has solutions – it's just a matter of finding the right approach. I love figuring out complex things and bringing them to logical completion.
